Utils Feature

The Utils feature provides various utility commands and functions.

Commands

`/utcnow`

Command to get the current UTC time.

- **Usage**: `/utcnow`

This command will display the current UTC time along with a link to an external UTC clock. It is particularly useful for the betting feature, which posts all timestamps in UTC.

This command allows users to easily reference the current UTC time, ensuring consistent and accurate timing for betting events and related activities.

Example

`/utcnow`

This will respond with an embedded message showing the current UTC time and a button to view an external UTC clock.
